SMART boiling pans introduced

In May, SteelTech revealed several new SMART boiling pans to Electrolux for distribution in the market. The range has now been extended with a new size pan. The new model holds 80 litres and supplements the existing range of 50, 100, 150, 200 and 300 litres.

At the same time, a new optional equipment was also launched: a foot pedal for stirring. Using the foot pedal, canteen operators can safely operate the stirrer with the lid open and use their free hands to do other tasks such as portioning food, etc.

At SteelTech, safety is a high-priority issue in product development. The SMART boiling pans are now being prepared for logging and saving the cooking process to ensure compliance with the correct food preparation parameters. The log results can be archived via a USB port at the front of the pan. The port can also be used to copy recipes to or from the pan.

SteelTech produces the SMART pan on an exclusive contract to Electrolux.
