*Kristian Ekström, Sweden Country Manager at Electrolux, presented the new Green & Clean Rack-type dishwasher.*

## Electrolux Green & Clean – Best in class!

**A perfect Rack-type dishwasher** must be efficient, cost-effective, quick and easy to maintain – it is important that the heavy baskets with tableware are dispensed with everything completely clean and hygienic day in and day out.

The new Electrolux Green & Clean Rack-type dishwasher guarantees perfect results – and with the lowest operating costs in the industry. Sustainability and reliability have been key factors in the development of the new Rack-type dishwashers, which makes them the perfect choice for many operations with high tableware turnover.

The new Rack-type dishwasher was launched at the Electrolux Forum held in Stockholm at the end of March. SteelTech was also on site to showcase the specially adapted Handling system developed by the company. Together with Electrolux, we also

arranged a training course for Swedish and Norwegian dealers to inform them about maintenance and the new set-up possibilities that have become available thanks to the new Handling system. Altogether around 100 people attended the forum with highly satisfied attendees.

*SteelTech representatives also had an opportunity to showcase the new handling system for the new Rack-type dishwasher.*
