What to find ? Please see below...

Discover latest configurations on **Train Wash Plants**

New 3D Front&Rear brushes allow for accurated washing at different positions under PC control architecture. Rolling stock carefully washed.

Introducing new **Bogie Wash Plants** for the XXIst century

Robotic arms cleaning bogies.

Selective washing process as if you were washing your bogie manually. Including hot and cold water and selecting working pressure. Water and energy saving.

New Generation of **CET** toilet extraction systems

CET systems now integrating automatic winch for recovering flexible hoses and improving anti-spillage system. Clean and safer as never before.

Ultimate **water treatment process** for railway depots

Environmental safety starts when you can be sure all your waste water sources are treated and unified in a special system. Latest developments on MBR filtration now also available at depot level.
